SUMMARY

DevOps/Cloud Engineer with nearly 3 years of experience building and operating AWS infrastructure and CI/CD pipeline — from large-scale production services at Samsung R&D to greenfield platforms designed end-to-end from client requirements. Skilled in Terraform, Kubernetes (EKS), ECS Fargate, GitOps and observability.

EDUCATION

Samsung R&D Center Vietnam

Mar. 2024 - Jun. 2024

- Samsung Talent Scholarship

Hanoi University of Science and Technology

Sep. 2020 - Sep. 2024

- Bachelor of Computer Science
- Degree grade: Good - CPA: 3.16

WORK EXPERIENCE

Samsung R&D Center Vietnam

Jun. 2024 - Jun. 2026

Devops Engineer

Service Operation P.

Project: Samsung Internet

- Built end-to-end CI/CD pipelines (GitHub Actions, ArgoCD) and automated infrastructure provisioning with GitOps, enabling repeatable, version-controlled deployments across multiple production services.
- Provisioned all infrastructure using Terraform, with automated policy and security gates (TFLint, tfsec, Checkov).
- Designed and configured AWS VPC networking for private EKS clusters — including subnets, route tables, and security groups — to ensure secure, reliable connectivity for production workloads.
- Implemented IAM Roles for Service Accounts (IRSA) to enforce secure, pod-level access control across Kubernetes workloads.
- Maintained CI/CD governance and Git repository workflows, leveraging OIDC federation for secure, keyless authentication to AWS resources.
- Configured CloudFront, WAF, and kube-prometheus metrics to protect backend services from malicious traffic while tracking application health, latency, and error rates.

VBA Technology

Jun. 2026 - Present

DevOps Engineer

Project: Giao Hang Sieu Viet

- Maintain and monitor a multi-namespace production Kubernetes cluster (GitOps via ArgoCD, Istio service mesh, Prometheus/Grafana), troubleshooting pod and deployment issues across backend services, Kafka, and RabbitMQ.
- Ensure platform security and reliability through ongoing management of Vault secrets, cert-manager TLS certificates, Harbor/Trivy container image scanning, and HPA tuning for workload scaling and stability under load.

SKILLS

Cloud Platform: AWS (EKS, ECS Fargate, RDS, ElastiCache, S3, EventBridge, Cloudfront, WAF, Shield, Route53, IAM, VPC, KMS)

Infrastructure as Code: Terraform (TFLint, Checkov)

Containerization & Orchestration: Docker (AWS ECS), Kubernetes (AWS EKS), Helm

CI/CD & GitOps: GitHub Actions, Jenkins, ArgoCD

Observability & Security: AWS Cloudwatch, Prometheus, Grafana (Loki, Alloy), FluentBit, Trivy, Gitleaks

Languages: Python, Bash, YAML
